

The Most Space Efficient Open-Storage System

Par Wall® is a powerful storage system due to its ability to create storage density in a variety of applications. Storage components are attached to a wall or freestanding frame. To take advantage of vertical space, Par Wall® incorporates baskets, bins and shelves, meeting a variety of storage requirements. Several options exist within the line to best suit your specific needs.

Freestanding – This is the original Par Wall®. The heavy-duty steel freestanding frame allows you to establish a stationary or mobile “wall” where ever you need one. The slots on 1” centers allow users to configure the baskets to fit any need. Using special brackets, the top baskets can be slanted for increased visibility and access.

Wall Panel –Par Wall® on louvered panels is a very traditional way of mounting baskets on a wall. These panels are the most economical Par Wall® option and permit the mixed use of bins and baskets. This approach keeps products off the floor and allows you to maximize your space by working around obstructions.

Lean Wall – Lean Wall® wall strips are a special design to help you work around obstructions on a wall, such as windows, fire extinguishers, light switches, and more. Lean Wall also gives you the ability to slant the baskets for easier access.

Par Wall® items simply hang from their means of support and are easily reconfigured as needs change. With a modular concept, Par Wall® allows components to be moved from structure to structure, without tools, keeping caregivers working efficiently while using minimal space.

The Most Space Efficient Open-Storage System

For maximum organization, dividers can be placed front-to-back and side-to-side, and label holders quickly identify contents. Our basket with “fine mesh” can hold small items and accept our innovative and patented Intelli-Flipper. The Intelli-Flipper has significant benefits over the use of bins in a Kanban application.

More space efficient than wire shelving, Par Wall® is an extremely flexible system that can grow and adapt to your changing needs, ensuring you have maximum storage proficiency.
