

## **LogiQuip Healthcare Storage Solutions receives Innovative Technology Designation from Vizient recognizing its Lean Kanban Flipper system for ParWall**

*Designation recognizes products that bring improvements to the health care industry*

[Galesburg, MI, 12/18/2018]– LogiQuip announced its **Lean Kanban Flipper System for ParWall** has received a 2018 Innovative Technology designation from [Vizient, Inc.](#), the largest member-driven health care performance improvement company in the country. The designation was based on the recommendations of health care experts serving on a member-led council who interacted with the product at the Vizient Innovative Technology Exchange held Oct. 4, 2018. The council determined the technology had the potential to enhance clinical care, patient safety, health care worker safety or improves business operations of health care organizations.

LogiQuip's ParWall Kanban Flipper products provide a quick, simple, and efficient system for the busy clinician while also offering a balanced and cost-effective solution for supply chain professionals. The patented system seamlessly integrates with LogiQuip's ParWall Baskets to reduce stock outs and eliminates the clumsy management necessary in more traditional two-bin systems. When coupled with LogiQuip's experienced services team, LogiQuip can provide clients with precision space utilization while ensuring that the inventory they need continues to turn over on a first-in, first-out basis.

"We are honored to be recognized by Vizient with this Innovative Technology Designation. We pride ourselves on providing high-quality, future-focused storage systems, designed exclusively for healthcare facilities. We are very thankful the member-led council identified the Kanban Flipper system as enhancing clinical care and improving business operations as those objectives are core to our mission," said AJ Willit, President/CEO.

"Hospitals and providers are looking for innovations that offer unique and cumulative benefit over other products available on the market today. Our member council determined this technology met the criteria to be recognized with the Innovative Technology designation. Congratulations to LogiQuip on receiving this designation," said Debbie Archer, Director of Procurement and Vizient Innovative Technology Program leader.

Vizient represents a diverse membership base that includes academic medical centers, pediatric facilities, community hospitals, integrated health delivery networks and non-acute health care providers and represents approximately \$100 billion in annual purchasing volume. Through its [Innovative Technology Program](#), Vizient works with member-led councils and task forces to review potentially innovative products. If it is determined that a product is innovative, Vizient may award a contract outside of the competitive bid cycle.
